

Adding admins

1. Make sure you stop your 7 Days to Die server
2. Click on Files
2. Click on the following folders **local_data > Saves**
3. You should now see a file called **serveradmin.xml**, double click on this file to open it.
4. Once the file opens scroll down until you see the following lines:

```
<admins>
  <!-- <user steamID="76561198021925107" name="Hint on who this user is" permission_level="0" /> -->
  <!-- <group steamID="103582791434672565" name="Steam Universe" permission_level_default="1000"
permission_level_mod="0" /> -->
</admins>
```

5. Now add the following line below the line that starts with `<group`

```
<user steamID="SteamIDHere" name="SteamUserNameHere" permission_level="0" />
```

Replace the **SteamIDHere** with the Steam64ID of the player you wish to grant admin to and also replace **SteamUserNameHere** with the Steam username of the player so you can identify the admin easier.

You can find the Steam64ID of the player by following the guide over at

<https://www.creeperhost.net/wiki/books/steam/page/how-to-find-a-players-steamid>

6. It should now look something like

```
<admins>
  <!-- <user steamID="76561198021925107" name="Hint on who this user is" permission_level="0" /> -->
  <!-- <group steamID="103582791434672565" name="Steam Universe" permission_level_default="1000"
permission_level_mod="0" /> -->
  <user steamID="SteamIDHere" name="SteamUserNameHere" permission_level="0" />
</admins>
```

7. Click on save then start your server up again.
